

DATASHEET

# OX Cloud

## The tools you need to stay connected anywhere

OX Cloud is an essential package for every small business.

### Email

One of the easiest-to-use and advanced email products available. Focused on productivity, it makes searching, filtering, and organizing intuitive.

One click on an email and Halo lets you see the sender's contact details and all your interactions (emails, meetings etc.). Attachment preview makes sure you always send the right file before you send it.

Large attachments can be sent as links. You can even set an expiration date to prevent old or sensitive files from staying in circulation.

### Email Security

Powerful antivirus, anti-spam, and anti-phishing software is built in. Using cutting-edge security technology, we make sure you are safe, and your mailbox remains clear of 'junk'.

Choose advanced security for a 'security boost'. Send encrypted messages with a single click. Get AI supported real-time anti-spam scanning. You can even recover deleted emails that have been removed from your Trash!

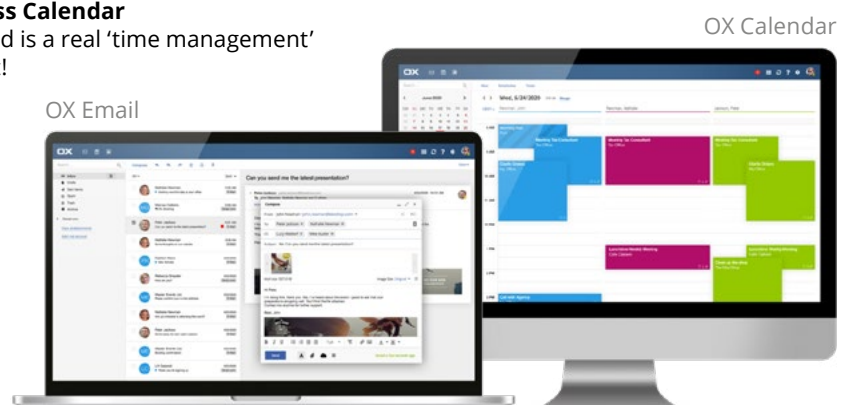

Ever unsubscribed from an email and ended up with even more spam? 'Safe Unsubscribe' unsubscribes on your behalf and helps keeps you Spam free.

### Business Calendar

OX Cloud is a real 'time management' product!

A digital calendar that makes life easy. With multiple views and advanced scheduling that helps you find a good time for a meeting, even across time-zones.

In one view, you see business, personal and company calendars. You can even share calendars with colleagues and external partners. Never miss a meeting with numerous configurable reminders.

# Team Management & Sharing

## Tasks

Create and Prioritize your tasks.

Create detailed tasks, assign them to others, create reminders and even check on progress. Alternatively create simple lists, sync them to your phone and use them as a to-do or shopping list. Simple and powerful.

## Cloud Storage – Drive

Drive is not just a place to store and sync files.

It is more like an extension to your computer – another disk in the cloud. Simply drag files from your computer to Drive. It not only syncs, but if an older version is already there a new version will automatically be created, keeping the original just in case.

Business flexibility is provided by separating private and company folders. You can easily share your folders with colleagues or external people.

You can even edit documents online directly from Drive. Work alone or together with others simultaneously.

If you already have another cloud storage product, you can simply plug it into OX Cloud. You can then easily drag files from one to another making file management simple.

## Sharing is Caring

OX Cloud offers many ways to share with others.

Drive lets you share files and folders with colleagues, external partners, or even photos with friends.

Calendar lets you create shared calendars that others can access.

Email lets you connect almost any third party account and then use it inside OX Cloud. You can even combine mailboxes into one unified mailbox.

## Any Device, Anywhere

OX Cloud is device agnostic. You can use it anywhere and it works on any device. Start working from your office laptop, continue while on the move from your phone and then finish off at home on your tablet.

You can even use the OX Cloud file synchronization app to work on files locally and have them synchronize to all your other devices.

OX Cloud at a glance:

## Increase your brand awareness

Connect your company's domain to build brand awareness and present a more professional image with email@your-domain.com

## Stable email for everyone

Reliable email with 99.9% guaranteed uptime.

## Availability

Access your email, calendar, contacts and files from anywhere and on any device with webmail or connect via POP and IMAP.

## Security

Using AI and predictive email defense software, OX Cloud fights to keep your inbox safe from spam, viruses, malware, ransomware, and phishing attacks.

## Data Privacy

OX Cloud email is completely ad-free, and we will never sell your data to third parties.

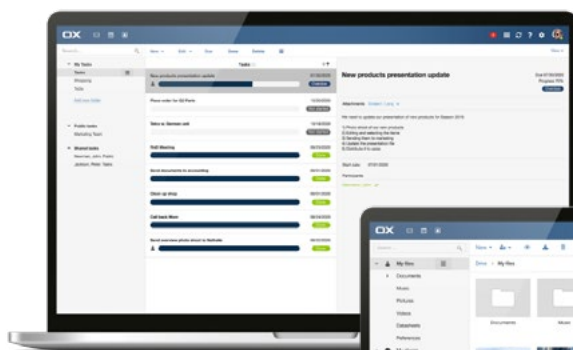

## Collaboration

Increase productivity and collaborate with your team through shared calendars, contacts, and tasks.

## Peace of mind

Create and edit text documents directly in the browser. Work with colleagues in real-time, while every change is saved automatically.
